SUMMARY

I am a hard working front end web developer with a passion for learning. I have a well-rounded foundation in test driven development and object oriented programming. I'm driven to work with a strong development team to learn and grow as well as create a quality product. With a background in financial analytics, I also bring strong business experience and attention to detail.

PROJECTS

Weatherly

Project built on React.js using the Weather Underground API to display a detailed weather forecast. For this project, I implemented asynchronous javascript to load various components and information onto the page. It also includes a custom built prefix search trie to load different locations.

EDUCATION

Turing School of Software and Design

Certificate of Web Application Development Front End Engineering 2017

University of Denver

BS Finance 2013

Awarded the Brad Busse full endowed scholarship for exemplary performance as a division one swimmer and as a student.

EMPLOYMENT
